Updates

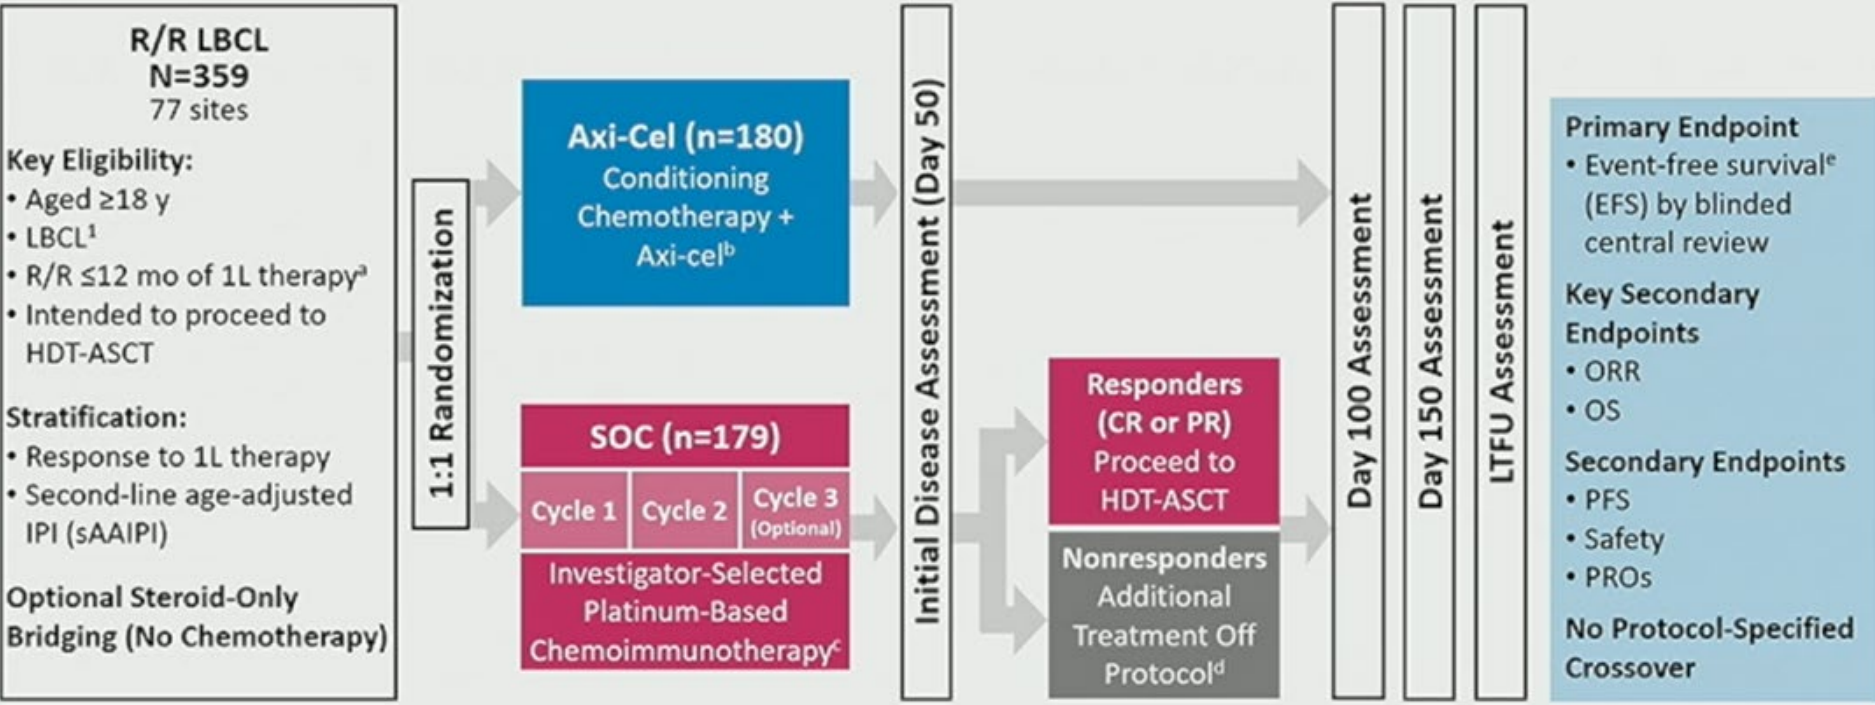

- **Large B-Cell Lymphoma**
 - **CAR T Cell as Second-Line Therapy (ZUMA-7, TRANSFORM, BELINDA)**
 - **CAR T-Cell Therapy for Primary Refractory DLBCL (ZUMA-12)**
- **Follicular Lymphoma (ZUMA-5)**
- **Myeloma**
 - **Cilta-cel (CARTITUDE)**
- **New CAR T-Cell Products, Approaches, Indications**
 - **Novel Targets**
 - **AlloCAR T Therapy**
 - **iPSC-Derived NK CAR T Cells**
 - **AML MICA/MICB**
 - **Myeloma - Gamma Secretase Inhibitor**

ZUMA-7: Uncharted Territory

ZUMA-7 Study Schema and Endpoints: Axi-Cel Versus SOC as Second-Line Therapy in Patients With R/R LBCL

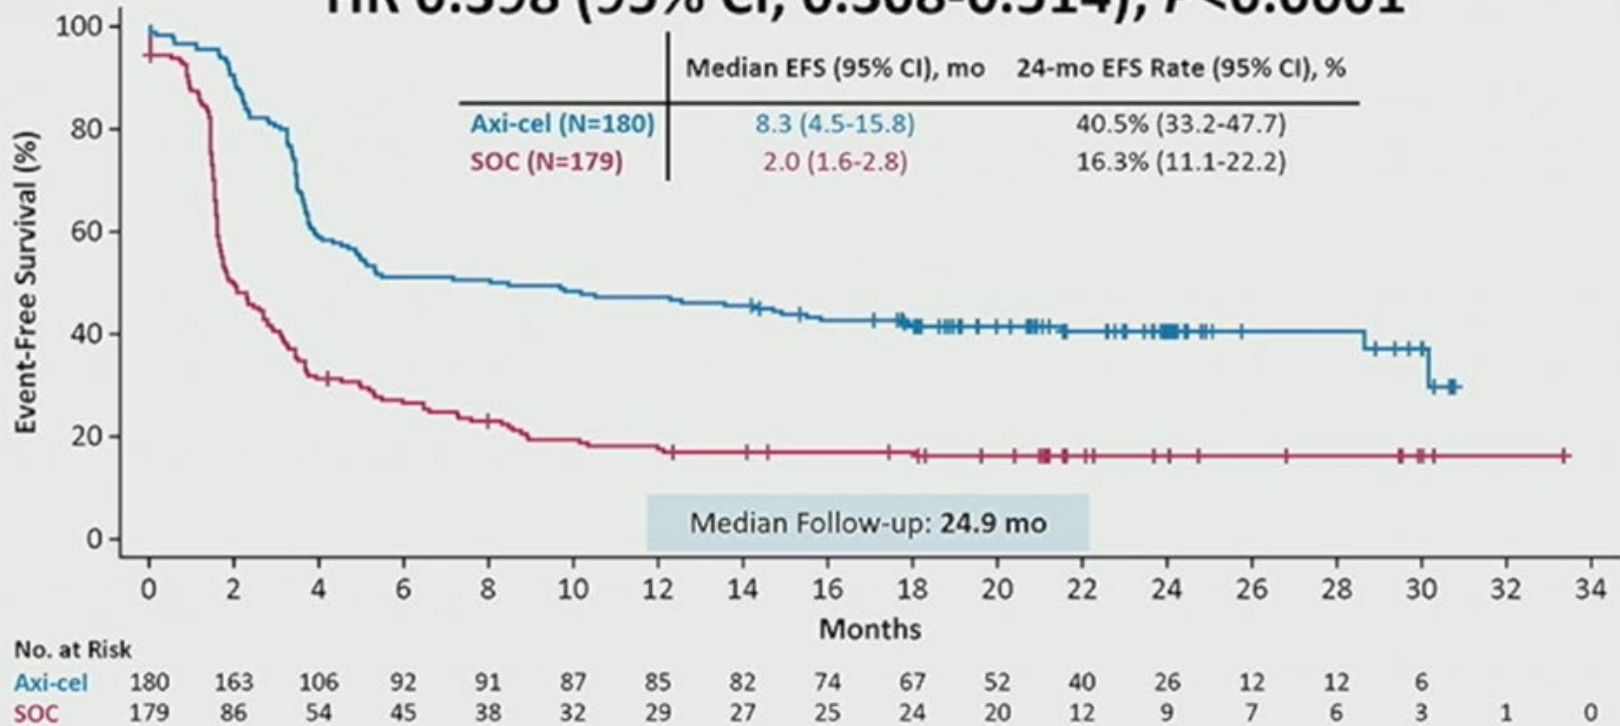

* Refractory disease was defined as no CR to 1L therapy; relapsed disease was defined as CR followed by biopsy-proven disease relapse ≤ 12 months from completion of 1L therapy. ^b Axi-cel patients underwent leukapheresis followed by conditioning chemotherapy with cyclophosphamide (500 mg/m²/day) and fludarabine (30 mg/m²/day) 5, 4, and 3 days before receiving a single axi-cel infusion (target intravenous dose, 2×10^6 CAR T cells/kg). ^c Protocol-defined SOC regimens included R-GDP, R-DHAP, R-ICE, or R-ESHAP. ^d 56% of patients received subsequent cellular immunotherapy. ^e EFS was defined as time from randomization to the earliest date of disease progression per Lugano Classification,² commencement of new lymphoma therapy, or death from any cause.

1. Swerdlow SH, et al. *Blood*. 2016;127:2375-2390. 2. Cheson BD, et al. *J Clin Oncol*. 2014;32:3059-3068.

Primary EFS Endpoint: Axi-Cel Is Superior to SOC

HR 0.398 (95% CI, 0.308-0.514); $P < 0.0001$

ORR Was Significantly Higher in Axi-Cel Versus SOC Patients

^a Not evaluable (NE): In the axi-cel arm, response assessments were not done for 4 patients. In the SOC arm, there were 4 patients with undefined disease and 14 who did not have response assessments done.

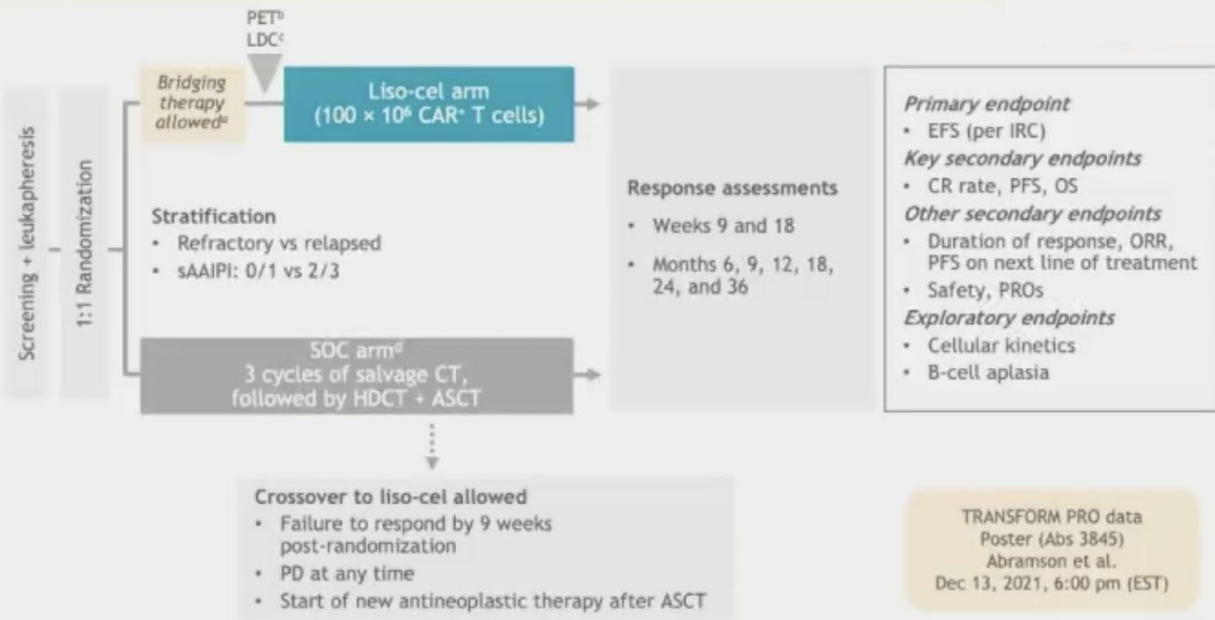

Lisocabtagene maraleucel for 2nd line (<12m) relapsed DLBCL

Kamdar et al, ASH 2021

TRANSFORM study design

Key eligibility

- Age 18–75 years
- Aggressive NHL
 - DLBCL NOS (de novo or transformed from indolent NHL), HGBCL (double/triple hit) with DLBCL histology, FL3B, PMBCL, THRBCL
- Refractory or relapsed ≤ 12 months after 1L treatment containing an anthracycline and a CD20-targeted agent
- ECOG PS ≤ 1
- Eligible for HSCT
- Secondary CNS lymphoma allowed
- LVEF > 40% for inclusion
- No minimum absolute lymphocyte count

- EFS is defined as time from randomization to death due to any cause, progressive disease, failure to achieve CR or PR by 9 weeks post-randomization, or start of a new antineoplastic therapy, whichever occurs first

Lisocabtagene maraleucel for 2nd line (<12m) relapsed DLBCL

Kamdar et al, ASH 2021

TRANSFORM: Event-free survival per IRC (ITT set; primary endpoint)

Median follow-up in both arms: 6.2 months

	Liso-cel arm (n = 92)	SOC arm (n = 92)
Patients with events, n	35	63
Stratified HR (95% CI)	0.349 (0.229–0.530)	
	P < 0.0001	
6-month EFS rate, % (SE)	63.3 (5.77)	33.4 (5.30)
Two-sided 95% CI	52.0–74.7	23.0–43.8
12-month EFS rate, % (SE)	44.5 (7.72)	23.7 (5.28)
Two-sided 95% CI	29.4–59.6	13.4–34.1

One-sided P value significance threshold to reject the null hypothesis was < 0.012

EFS is defined as the time from randomization to death due to any cause, progressive disease, failure to achieve CR or PR by 9 weeks post-randomization or start of a new antineoplastic therapy due to efficacy concerns, whichever occurs first.
CI, confidence interval; HR, hazard ratio; NR, not reached; SE, standard error.

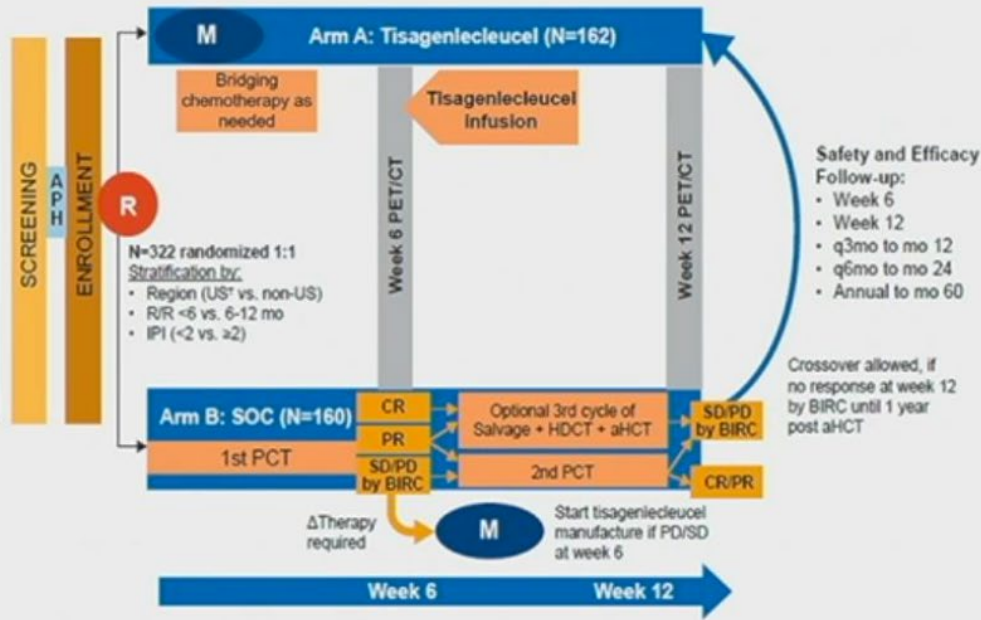

Kamdar M, et al. ASH 2021 [Abstract #91]

Tisagenlecleucel for 2nd line (<12m) relapsed DLBCL

Bishop et al, NEJM 2021

BELINDA Study Design

- Key eligibility criteria:**
- ≥18 years-old
 - Histologically-confirmed aNHL r/r within 12 months of first-line treatment
 - autoHCT eligible
 - ECOG PS 0-1

Data cutoff: May 6, 2021

- Primary Endpoint:**
Event-free Survival
- EFS Event:**
- SD/PD by BIRC at/after week 12 ± 1 week
 - Death at any time

- Secondary Endpoints:**
- ORR: Best overall response at/after week 12
 - Safety
 - Cellular kinetics

aHCT, autologous hematopoietic cell transplantation; aNHL, aggressive non-Hodgkin lymphoma; APH, leukapheresis; BIRC, blinded independent review committee; CR, complete response; CT, computed tomography; ECOG PS, Eastern Cooperative Oncology Group performance status; EFS, event-free survival; HDCT, high-dose chemotherapy; IPI, International Prognostic Index; M, manufacturing; ORR, overall response rate; OS, overall survival; PCT, platinum-based immunochemotherapy; PD, progressive disease; PET, positron emission tomography; PR, partial response; q3mo, every 3 months; q6mo, every 6 months; R, randomization; SD, stable disease; SOC, standard of care; US, United States.

Tisagenlecleucel for 2nd line (<12m) relapsed DLBCL

Bishop et al, NEJM 2021

	No. of Patients	No. of Events	Median Event-free Survival (95% CI) mo
Standard Care	160	104	3.0 (3.0–3.5)
Tisagenlecleucel	162	117	3.0 (2.9–4.2)

Hazard ratio for event or death (tisagenlecleucel vs. standard care), 1.07 (95% CI, 0.82–1.40)
P=0.61

No. at Risk

Standard care	160	148	45	31	25	17	12	7	6	3	1	0
Tisagenlecleucel	162	156	57	32	19	13	6	1	1	0	0	0

Figure 2. Kaplan–Meier Plot of Event-free Survival.

An event was defined as progressive disease or stable disease on or after day 71 or death at any time (i.e., event-free survival at a given time point represents the estimated percentage of patients who had a complete or partial response at this time point among all ran-

Summary of second line CAR T studies

Randomized trials of CAR T-cells vs. SOC in 2nd line transplant-eligible DLBCL with primary refractory disease or relapse within 1 year of 1st line therapy

	ZUMA-7	TRANSFORM	BELINDA
CAR T-cell	Axicabtagene Ciloleucel	Lisocabtagene Maraleucel	Tisagenlecleucel
n	359	184	322
% infused in CAR arm	94%	98%	96%
Median EFS	8.3 mo vs. 2 mo	10.1 mo vs. 2.3 mo	3 mo vs. 3 mo
Hazard ratio	0.398 ($P < 0.0001$)	0.349; ($P < 0.0001$)	1.07 ($P = 0.69$)
Median follow-up	25 months	6 months	10 months
CR rate	65% vs 32%	66% vs 39%	28% vs 28%
Grade ≥ 3 CRS/NT	6% / 21%	1% / 4%	5% / 3%
	Locke, et al. Abstract 2	Kamdar, et al. Abstract 91	Bishop, et al. Abstract LBA-6

Implications of second line CAR T studies

- In patients with chemoresistant disease (short first remission), more chemo (and AutoSCT) is not effective
- Why different outcome in BELINDA study with tisagenlecleucel?
 - Chemotherapy bridging (sicker patients)
 - Additional chemo cycles for standard group
 - Longer time (52d) to get CAR T (and 25.9% pre-infusion PD)
 - Different agent
 - Less lymphodepletion
 - Event definitions
- CAR T will be SOC for those with PD < 1 year
- AutoSCT remains SOC for those with later relapses

Updates

ZUMA-12 Study Design

^a Administered after leukapheresis and completed prior to initiating conditioning chemotherapy. Therapies allowed were corticosteroids, localized radiation, and HDMP+R. PET-CT was required after bridging.

1. Cheson BD, et al. *J Clin Oncol*. 2014;32:3059-3068.

Axi-cel, axicabtagene ciloleucel; CAR, chimeric antigen receptor; DOR, duration of response; DS, Deauville score; ECOG, Eastern Cooperative Oncology Group performance status; EFS, event-free survival; HDMP+R, high-dose methylprednisolone plus rituximab; HGBL, high-grade B-cell lymphoma; IPI, International Prognostic Index; IV, intravenous; LBCL, large B-cell lymphoma; mAb, monoclonal antibody; ORR, objective response rate; OS, overall survival; PET, positron-emission tomography; PFS, progression-free survival.

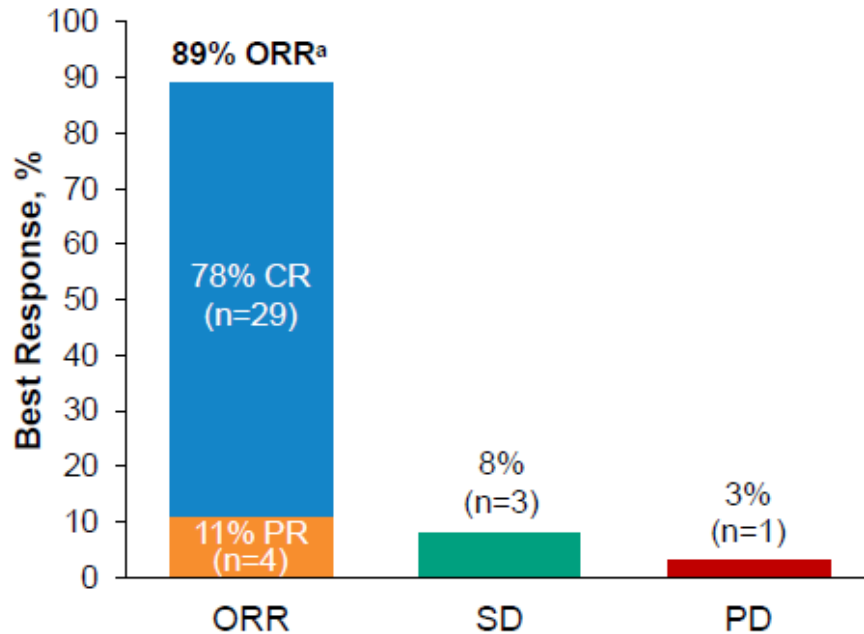

Neelapu et al ASH 2021 Abstract 739

Baseline Patient Characteristics

Characteristic	All Treated (N=40)
Median age (range), years	61 (23–86)
≥65 years, n (%)	15 (38)
Male, n (%)	27 (68)
Disease stage III/IV, n (%)	38 (95)
ECOG 1, n (%)	25 (63)
1 Prior line of systemic therapy (2 cycles), n (%)	40 (100)
Best response of PR/SD to prior therapy ^a	23 (58)
Best response of PD to prior therapy ^a	16 (40)
Double- or triple-hit as determined by FISH per investigator, n (%) ^b	16 (40)
Double- or triple-hit as determined by FISH per central laboratory, n (%) ^b	10 (25)
IPI score ≥3, n (%) ^c	31 (78)
Deauville score 4, n (%)	19 (48)
Deauville score 5, n (%)	21 (53)

^a One patient was not estimable for response to prior therapy. ^b Of 6 patients reported to be double- or triple-hit per investigator, 3 remained inconclusive, 1 was determined not to be double- or triple-hit, and 2 were not tested by the central laboratory. A total of 8 treated patients did not have central laboratory testing. ^c IPI score for eligibility was at the time of diagnosis or any time between diagnosis and enrollment. ECOG, Eastern Cooperative Oncology Group performance status; FISH, fluorescence in situ hybridization; IPI, International Prognostic Index; PD, progressive disease; PR, partial response; SD, stable disease.

ORR Was 89% (95% CI, 75–97) and CR Rate Was 78% (95% CI, 62–90) Among Efficacy-Evaluable Patients

Efficacy Evaluable N=37 ^b	
Median follow-up (range), months	15.9 (6.0–26.7)
Patients with ≥12-month follow-up, n (%)	23 (62)
Patients with ongoing response as of data cutoff, n (%)	27 (73)
Median time to response (range), months	
Initial objective response	1.0 (0.9–6.8)
Initial CR	1.0 (0.9–6.8)
Patients converted from PR/SD to CR, n (%) ^c	
PR to CR	6 (16)
SD to CR	1 (3)

- Among all treated patients (N=40), ORR was 90% (95% CI, 76–97); CR rate was 80% (95% CI, 64–91)

^a Response assessments are based on best overall response. ^b Includes all treated patients with centrally confirmed disease type (double- or triple-hit lymphomas) or IPI score ≥3 who received ≥1×10⁶ CAR T cells/kg.

^c All 7 patients converted to a CR by Month 6 postinfusion.

CR, complete response; ORR, objective response rate; PD, progressive disease; PR, partial response; SD, stable disease.

Updates

- **Large B-Cell Lymphoma**
 - **CAR T Cell as Second-Line Therapy (ZUMA-7, TRANSFORM, BELINDA)**
 - **CAR T for Primary Refractory DLBCL (ZUMA-12)**
- **Follicular Lymphoma (ZUMA-5)**
- **Myeloma**
 - **Cilta-cel (CARTITUDE)**
- **New CAR T-Cell Products, Approaches, Indications**
 - **Novel Targets**
 - **AlloCAR T Therapy**
 - **iPSC-Derived NK CAR T Cells**
 - **AML MICA/MICB**
 - **Myeloma - Gamma Secretase Inhibitor**

Updated Analysis

- The updated efficacy analysis occurred when ≥ 80 treated patients with FL had ≥ 24 months of follow-up, per protocol^a
- Efficacy analyses are reported in the 110 efficacy-eligible patients (86 with FL; 24 with MZL)^a
 - The median follow-up for patients with FL was 30.9 months (range, 24.7–44.3)
 - The median follow-up for patients with MZL was 23.8 months (range, 7.4–39.4)
- Safety data are reported for all 149 patients treated with axi-cel (124 with FL; 25 with MZL)
- Data cutoff date: March 31, 2021

^a Efficacy-eligible patients (inferential analysis set) included ≥ 80 treated patients with FL who had ≥ 24 months of follow-up after axi-cel infusion and treated patients with MZL who had ≥ 4 weeks of follow-up after axi-cel infusion as of the data cutoff date.

Axi-cel, axicabtagene ciloleucel; FL, follicular lymphoma; MZL, marginal zone lymphoma.

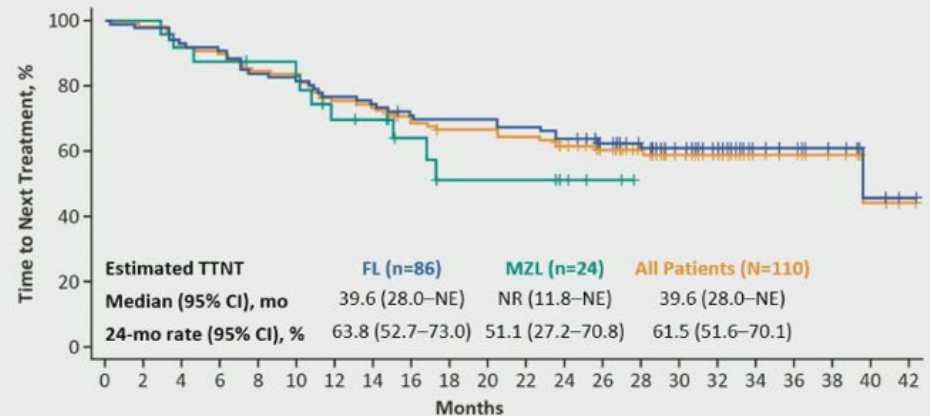

DOR and TTNT

Duration of Response

No. at Risk	0	2	4	6	8	10	12	14	16	18	20	22	24	26	28	30	32	34	36	38	40
FL	81	77	69	64	64	61	54	53	52	48	47	45	14	12	11	10	10	9	1	1	0
MZL	20	18	17	16	16	12	6	6	6	4	4	4	0								
All Patients	101	95	86	80	80	73	60	59	58	52	51	49	14	12	11	10	10	9	1	1	0

Time to Next Treatment^a

No. at Risk	0	2	4	6	8	10	12	14	16	18	20	22	24	26	28	30	32	34	36	38	40	42

CRISPR Therapeutics Presents Positive Data on Allogeneic CRISPR-based CAR-T Cell Therapies at AACR 2018

THE NEXT REVOLUTION IN CELL THERAPY

Allogene is developing allogeneic chimeric antigen receptor T cell (AlloCAR™) therapy to find the next immunologic breakthrough in cancer. That's how we're leading today, creating tomorrow.

LEARN ABOUT AlloCAR™ THERAPY

FT596-101: Patient Status and Time on Study

≥90M FT596 Cells

- Median study follow up time for patients treated at ≥90M FT596 cells is 4.2 months
- 10 of 13 responders remain in response at data cutoff between 1.9 and 10.8 months from initiation of treatment

CAR = Chimeric antigen receptor; CR = Complete response; DLBCL = Diffuse large B-cell lymphoma; FLGU = Follicular Lymphoma Grade Unknown; G2FL = Grade 2 follicular lymphoma; G3BFL = Grade 3B follicular lymphoma; HGBCL = High-grade B-cell lymphoma; M = Million; MCL = Mantle cell lymphoma; PD = Progressive disease; PR = Partial response; RT = Richter transformation; SD = Stable disease; SDRPL = Splenic diffuse red pulp small B-cell lymphoma; SLL = Small lymphocytic lymphoma; tNHL = Transformed indolent lymphoma; WM = Waldenstrom macroglobulinemia

Data cutoff date: 11 October 2021

Right arrow indicates subject is still in follow-up without documented disease progression or anti-cancer therapy at time of data cutoff
Patient 2038 pending response assessment; not included in efficacy-evaluable population

Conclusions

- CAR T (Axi-cel, Liso-cel) is established as second-line therapy for DLBCL with early disease progression (<12 months) **ZUMA-7, TRANSFORM, BELINDA**
- CAR T shows encouraging results in primary refractory lymphoma **ZUMA-12**
- Mature follow-up confirms a high proportion of durable remissions in FL, MZL. **ZUMA-5**
- Myeloma
 - Encouraging response rates and duration of response in heavily pretreated patients
- Many novel CAR T-cell innovations
 - Targets
 - Products
 - Indications
 - Combinations
