

Novel Agents in CLL

ASH 2021 Updates

John N. Allan
Assistant Professor of Medicine

02.25.2022

Abstracts to Be Reviewed

- **#391: Pirtobrutinib, A Next Generation, Highly Selective, Non-Covalent BTK Inhibitor in Previously Treated CLL/SLL: Updated Results from the Phase 1/2 BRUIN Study**
- **#392: Preliminary Efficacy and Safety of MK-1026, a Non-Covalent Inhibitor of Wild-Type and C481S Mutated Bruton Tyrosine Kinase, in B-Cell Malignancies: A Phase 2 Dose Expansion Study**
- **#3730: A Phase 1 Study to Evaluate the Safety, Pharmacokinetics (PK) and Pharmacodynamics (PD) of Lisafoclax (APG-2575), a Novel BCL-2 Inhibitor (BCL-2i), in Patients (pts) with Certain Relapsed or Refractory (R/R) Hematologic Malignancies (HMs)**
- **#2627: Subcutaneous Epcoritamab in Patients with Relapsed/Refractory Chronic Lymphocytic Leukemia: Preliminary Results from the Epcore CLL-1 Trial**

Introduction

- Bruton tyrosine kinase inhibitors (BTKi, like ibrutinib, acalabrutinib, zanubrutinib) and BCL-2 Inhibitor venetoclax are all FDA-approved agents and are currently used in the routine management of CLL
- All have become standard approaches in both frontline and relapsed refractory settings in CLL among other B-cell histologies, thus no longer novel
- This presentation will focus on recent updates from ASH 2021, highlighting molecules and biologics with novel mechanisms of action, all of which are remain under clinical investigation.

Abstract 391: Mato et al, ASH 2021

Pirtobrutinib, A Highly Selective, Non-covalent (Reversible) BTK Inhibitor In Previously Treated CLL/SLL: Updated Results From The Phase 1/2 BRUIN Study

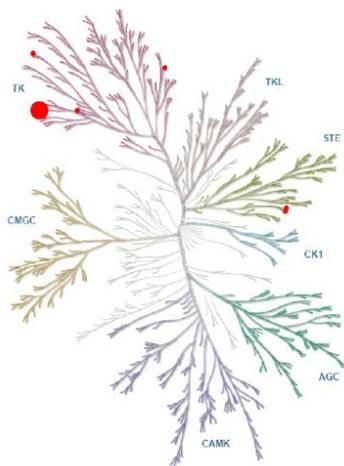

Anthony R. Mato¹, John M. Pagel², Catherine C. Coombs³, Nirav N. Shah⁴, Nicole Lamanna⁵, Talha Munir⁶, Ewa Lech-Maranda⁷, Toby A. Eyre⁸, Jennifer A. Woyach⁹, William G. Wierda¹⁰, Chan Y. Pirtobrutinib Is a Potent and Selective Reversible BTKi

Kinome selectivity¹

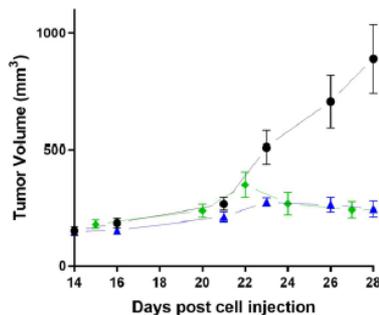

Highly selective for BTK

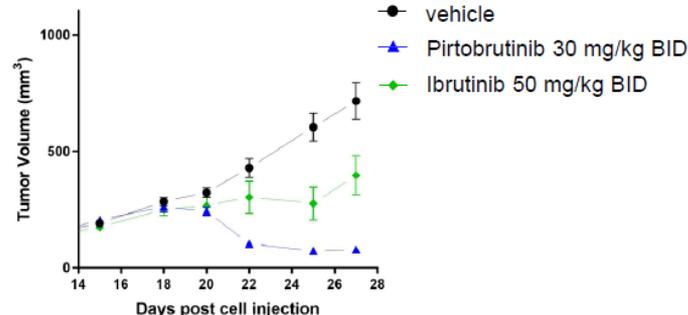

Xenograft models

In vivo activity similarly efficacious as ibrutinib in WT; superior in C481S

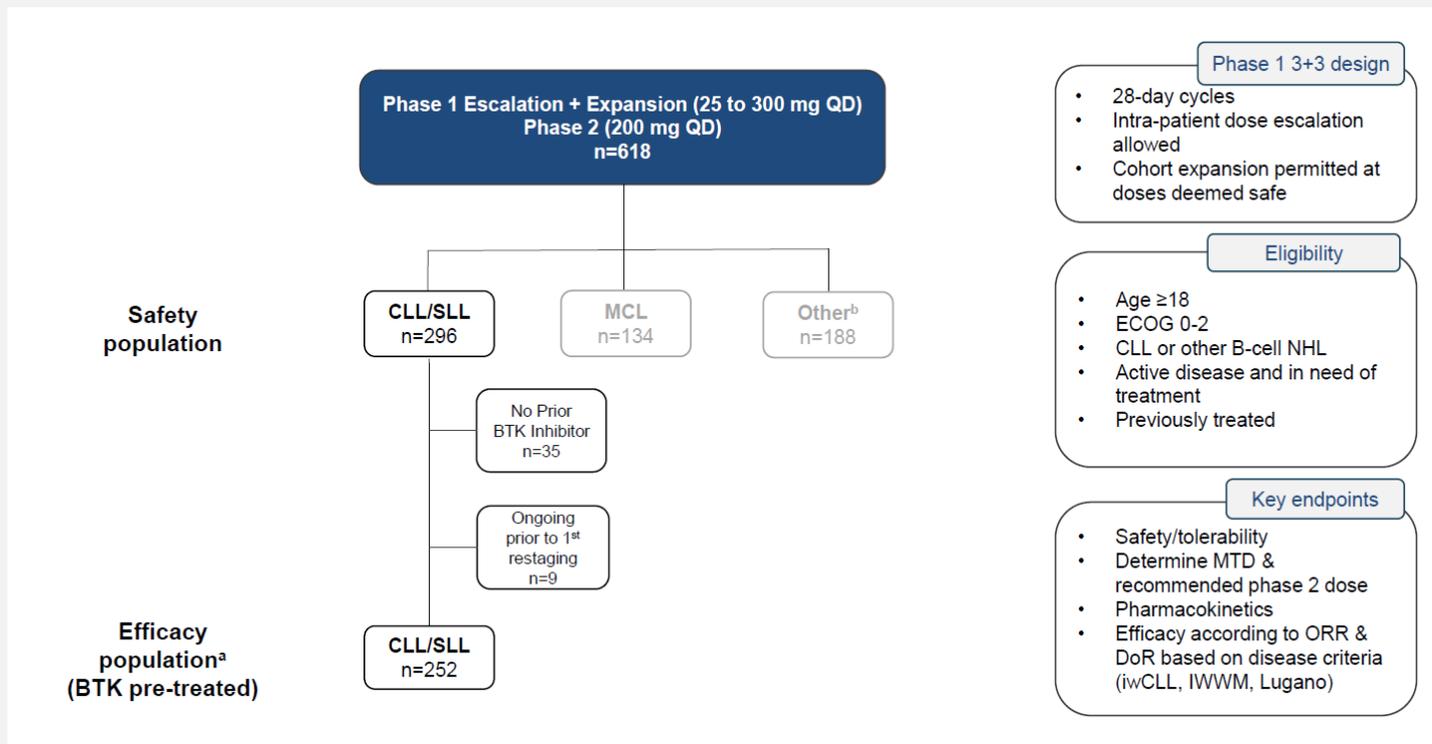

TMD8 BTK-WT

TMD8 BTK-C481S

Bruin: Phase 1 / 2 Study Design

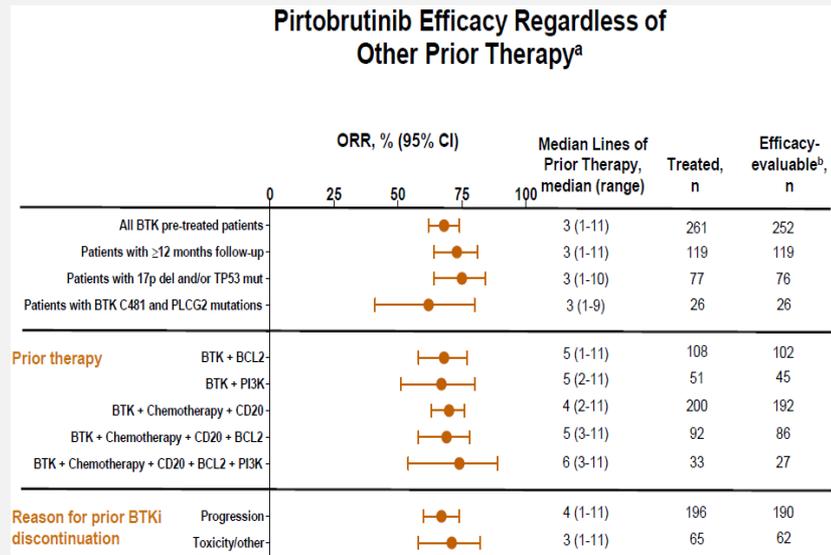

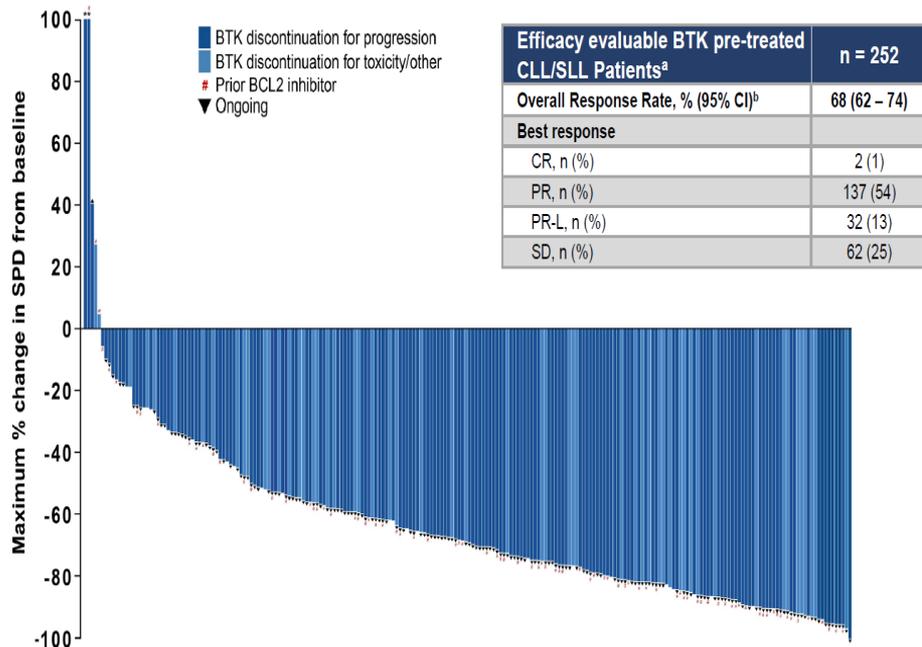

Baseline Characteristics

Characteristics	N = 261
Median age, years (range)	69 (36-88)

Abstract 2627: Kater et al, ASH 2021

Epicoritamab

- Epicoritamab is a fully humanized bispecific antibody that induces potent activation and cytotoxic activity of CD4⁺ and CD8⁺ T cells, which targets and eliminates CD20-expressing cells

EPCORE CLL-1: Study Design

Open-label, multicenter, phase 1b/2 trial of single-agent epcoritamab in adults with R/R CLL

Key inclusion criteria

- Diagnosis of CLL with evidence of CD20⁺
- Previously treated with ≥ 2 prior lines of systemic therapy, including treatment with (or intolerance to) a BTK inhibitor
- Measurable disease with $\geq 5 \times 10^9/L$ B lymphocytes or measurable lymphadenopathy, and/or organomegaly
- ECOG PS 0–2
- Acceptable laboratory parameters

Epcoritamab^a in 4-wk (28-d) cycles

QW C1–3, Q2W C4–9, Q4W C10+ until progression or unacceptable toxicity

Phase 1b: Dose escalation

- 2 full-dose levels
24 mg → 48 mg

Primary objectives:
DLT/Safety and tolerability

Key secondary objective:
Antitumor activity^b

Phase 2: Expansion

- 2 arms at RP2D (48 mg)
– Cohort 1: R/R CLL

Primary objective:
Antitumor activity^b

Data cutoff: October 1, 2021

Epcoritamab: Baseline Characteristics

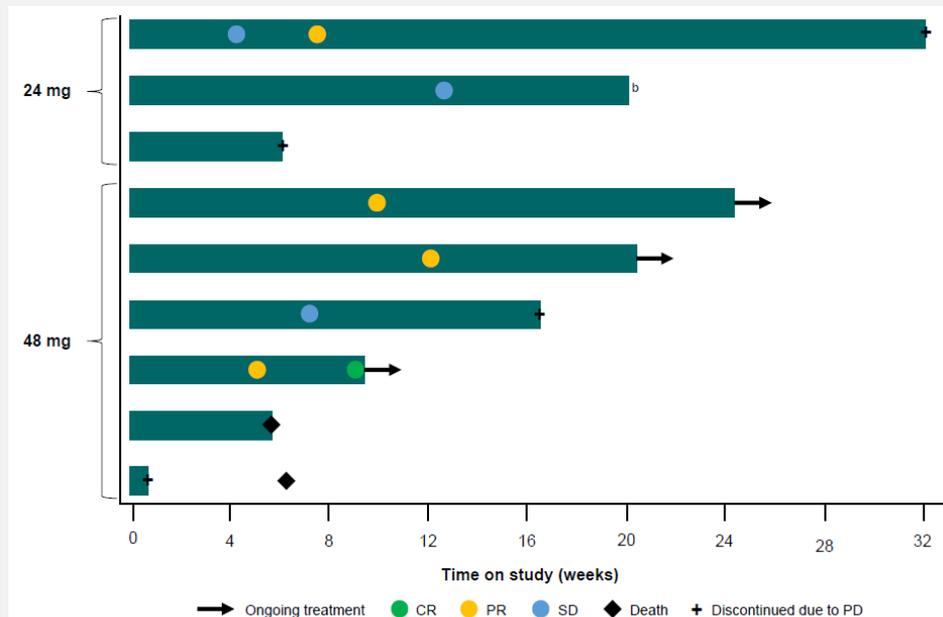

Characteristic		Total N=11
Median age (range), y		63 (50–77)
Male, n (%)		10 (91)

	del(13q)	8 (73)
	del(17p)	7 (64) ^h ←
	Trisomy 12	3 (27) ⁱ

Data cutoff: October 1, 2021. ^aCLL stage assessed at screening. Method of staging varied by geographic region. ^b*TP53* data were missing for 1 patient. ^c*IGHV* data were missing for 3 patients. ^d*SF3B1* data were missing for 8 patients. ^e*NOTCH1* data were missing for 8 patients. ^f*BIRC3* data were missing for 9 patients. ^gdel(11q) data were missing for 1 patient. ^hdel(17p) data were missing for 1 patient. ⁱTrisomy 12 data were missing for 2 patients.

Epcoritamab: Efficacy

Swimmer's Plot

Data cutoff: October 1, 2021. *The response-evaluable population includes patients who had evaluable disease at baseline and ≥ 1 postbaseline response evaluation or died within 60 d of first dose. *Patient discontinued due to physician decision.

Responses were observed in 4 patients, including 1 CR and 3 PRs

Responders had high-risk disease; 3 of 4 responders had *TP53* aberrations

Epcoritamab: Safety

TEAE ≥15%, n (%)	Total N=11			
	Grade 1–2	Grade 3	Grade 4	Any grade
CRS	8 (73)	0	0	8 (73)

Thrombocytopenia	0	1 (9)	4 (36)	5 (45)
Anemia	0	3 (27)	0	3 (27)
Neutropenia	0	1 (9)	2 (18)	3 (27)

Data cutoff: October 1, 2021.

- No DLTs occurred at 24 or 48 mg
- The most common TEAEs were CRS (73%), thrombocytopenia (45%), fatigue (36%), and injection-site reaction (36%)

	Total N=11
CRS, ^a n (%)	8 (73)
Grade 1	2 (18)
Grade 2	6 (55)
CRS leading to dose delay	3 (27)
Median time to onset, d (range)	9 (2–23)

Data cutoff: October 1, 2021. ^aCRS graded by Lee et al⁸ criteria.

- CRS events occurred early in treatment and resolved
- No patient discontinued epcoritamab due to CRS
- No cases of ICANS or tumor lysis syndrome were observed

Conclusions

- **Reversible BTKi appear well tolerated and demonstrate significant activity in R/R CLL in both wt and mutated BTK settings**
- **BCL2 inhibitor lisaftoclax demonstrates encouraging activity with a manageable safety profile and ease of use with daily ramp-up without TLS**
- **Bispecific epcoritamab demonstrates encouraging activity in a heavily pretreated high-risk R/R CLL population with an acceptable safety profile**
- **There is ongoing future development, with combination therapy currently being explored**
- **There are additional targets to address resistance currently in clinical development (including, but not limited to PKC- β , PROTAC BTK degraders, MCL1/CDK9 inhibitors, anti-BAFF mAb)**
