Study overview (NCT03671018)

Key inclusion criteria

- LBCL (*de novo* DLBCL, HGBCL, trFL, or Grade 3b FL)
- ≥1 prior line of therapy, including an anti-CD20-directed therapy
- Patients who were ineligible for ASCT

Objectives

- Efficacy and safety of mosun-pola
- Primary endpoint: Best ORR[1] by independent review committee (IRC)

Mosun-pola fixed duration administration*

Mosun†

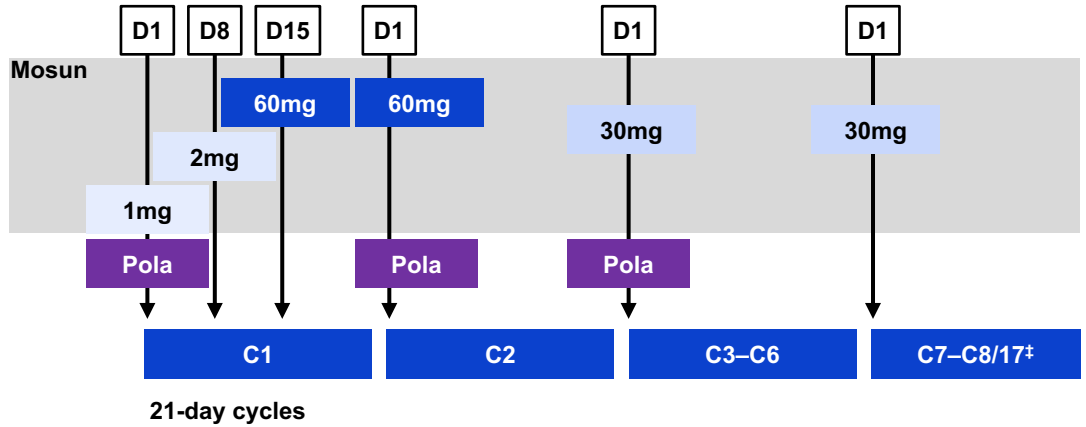
- Cycle (C) 1 step-up dosing for CRS mitigation
- Q3W intravenous infusions at RP2D (C1–8/17)‡

Pola

- Q3W intravenous infusions (1.8mg/kg) (Day [D]1, C1–6)

No mandatory hospitalization

Retreatment with mosun-pola was permitted



*Mosunetuzumab RP2D: C1D15 and C2D1 (1/2/60mg), and 30mg for subsequent cycles.

†**Corticosteroid premedication was required prior to each dose in C1 and C2 and was optional for C3+.**

‡Patients who achieved CR completed mosunetuzumab after C8, while patients who had PR or SD continued mosunetuzumab for a total of 17 cycles, unless progressive disease or unacceptable toxicity occurred.

How does BsAb fit into 3L+ treatment landscape?

3L+ options (R/R aBCL)

- Investigational agent
- Immunochemotherapy
- CART (if not given in 2L)
- Pola-BR
- Selinexor
- Tafasitamab + Len
- Loncastuximab tesirine
- BsAb (Glofitamab, Epcoritamab)
- Best supportive care or XRT

3L+ options (R/R FL)

- Investigational agent
- CD19CAR T
- Immunochemotherapy (BR, RCHOP, …)
- Rituximab + Lenalidomide
- Tezemetostat
- Mosunetuzumab
- Obinotuzumab + zanubrutinib
- Best supportive care or XRT

3rd line + setting

- 68 y.o. man with DLBCL who has relapsed disease
- Prior treatment: RCHOP x 6, Pola-BR x 2(bridging), CD19AR T

Can CD20/CD3 BsAb monotherapy work well in CAR experienced patients?
